

SAFE ECLIPSE

AVOID SERIOUS RISKS WHEN OBSERVING THE SOLAR ECLIPSE

Use ISO 12312-2:2015 certified eclipse glasses.
Do not look at the sun without approved protection
and pay special attention to children and older adults.

Regular sunglasses do not protect your eyes
from direct solar radiation.

Do not look at the sun through a mobile phone,
camera, binoculars, or telescopes – not even while
wearing certified eclipse glasses. These devices
may only be used with specific solar filters
(ISO 12312-2:2015).

You can use a pinhole projector to view
the shadow of the phenomenon.

Apply sunscreen, wear a hat, and protective
clothing to avoid sunburn while waiting.

If you can see it from your home or
tourist accommodation, AVOID travel.

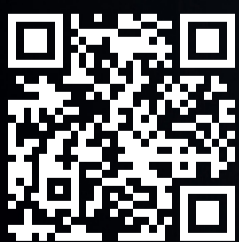

Remember that it is prohibited to
light fires and to park on sidewalks
or in unauthorized areas.

Do not drink alcohol if
you are driving a vehicle
or operating a boat.
